Pdms-2 Peabody Developmental Motor Scales - Second Edition: Complete Test Rebecca R. Fewell M. Rhonda Folio

Ages: Birth through 5 years Testing Time: 45 - 60 Minutes Administration: Individual The PDMS-2 is an early childhood motor development program that provides (in one package) both in-depth assessment and training or remediation of gross and fine motor skills. The assessment is composed of six subtests that measure interrelated motor abilities that develop early in life. It is designed to assess the motor skills of children from birth through 5 years of age. Reliability and validity have been determined empirically. The normative sample consisted of 2,003 persons residing in 46 states. The PDMS-2 can be used by occupational therapists, physical therapists, diagnosticians, early intervention specialists, adapted physical education teachers, psychologists, and others who are interested in examining the motor abilities of young children. Subtests: Reflexes: This 8-item subtest measures a child's ability to automatically react to environmental events. Because reflexes typically become integrated by the time a child is 12 months old, this subtest is only given to children birth through 11 months. Stationary: This 30-item subtest measures a child's ability to sustain control of his or her body within its center of gravity and retain equilibrium. Locomotion: This 89-item subtest measures a child's ability to move from one place to another. The actions measured include crawling, walking, running, hopping, and jumping forward. Complete PDMS-2 Kit includes: Examiner's Manual, Guide to Item Administration, 25 Profile/Summary Forms, 25 Examiner Record Booklets, a Peabody Motor Activities Program Manual, a Black and White Peabody Motor Development Chart, and manipulatives, all in a sturdy storage box. This item may differ from the image shown. This item may be a replacement or optional part for the image shown, or differ in model, color, etc. Please review the title and features carefully.
