Empirical Inference: Festschrift in Honor of Vladimir N. Vapnik

Empirical Inference: Festschrift in Honor of Vladimir N. Vapnik

This book honours the outstanding contributions of Vladimir Vapnik, a rare example of a scientist for whom the following statements hold true simultaneously: his work led to the inception of a new field of research, the theory of statistical learning and empirical inference; he has lived to see the field blossom; and he is still as active as ever. He started analyzing learning algorithms in the 1960s and he invented the first version of the generalized portrait algorithm. He later developed one of the most successful methods in machine learning, the support vector machine (SVM) – more than just an algorithm, this was a new approach to learning problems, pioneering the use of functional analysis and convex optimization in machine learning.

Part I of this book contains three chapters describing and witnessing some of Vladimir Vapnik's contributions to science. In the first chapter, Léon Bottou discusses the seminal paper published in 1968 by Vapnik and Chervonenkis that lay the foundations of statistical learning theory, and the second chapter is an English-language translation of that original paper. In the third chapter, Alexey Chervonenkis presents a first-hand account of the early history of SVMs and valuable insights into the first steps in the development of the SVM in the framework of the generalised portrait method.

The remaining chapters, by leading scientists in domains such as statistics, theoretical computer science, and mathematics, address substantial topics in the theory and practice of statistical learning theory, including SVMs and other kernel-based methods, boosting, PAC-Bayesian theory, online and transductive learning, loss functions, learnable function classes, notions of complexity for function classes, multitask learning, and hypothesis selection. These contributions include historical and context notes, short surveys, and comments on future research directions.

This book will be of interest to researchers, engineers, and graduate students engaged with all aspects of statistical learning.

From reader reviews:

James Brown:

What do you ponder on book? It is just for students because they are still students or it for all people in the world, what the best subject for that? Merely you can be answered for that concern above. Every person has several personality and hobby for every other. Don't to be compelled someone or something that they don't desire do that. You must know how great and also important the book Empirical Inference: Festschrift in Honor of Vladimir N. Vapnik. All type of book could you see on many solutions. You can look for the internet solutions or other social media.

Henry Woods:

Reading a reserve tends to be new life style in this particular era globalization. With reading you can get a lot of information that may give you benefit in your life. Having book everyone in this world could share their idea. Publications can also inspire a lot of people. A great deal of author can inspire all their reader with their story or perhaps their experience. Not only the storyplot that share in the ebooks. But also they write about advantage about something that you need illustration. How to get the good score toefl, or how to teach your young ones, there are many kinds of book that you can get now. The authors on earth always try to improve their proficiency in writing, they also doing some investigation before they write to the book. One of them is this Empirical Inference: Festschrift in Honor of Vladimir N. Vapnik.

Gretchen Meehan:

Your reading sixth sense will not betray you actually, why because this Empirical Inference: Festschrift in Honor of Vladimir N. Vapnik publication written by well-known writer whose to say well how to make book which might be understand by anyone who have read the book. Written with good manner for you, leaking every ideas and publishing skill only for eliminate your own personal hunger then you still skepticism Empirical Inference: Festschrift in Honor of Vladimir N. Vapnik as good book not just by the cover but also by content. This is one reserve that can break don't ascertain book by its deal with, so do you still needing a different sixth sense to pick this kind of!? Oh come on your reading through sixth sense already said so why you have to listening to an additional sixth sense.

Ricardo Donaldson:

Are you kind of busy person, only have 10 or perhaps 15 minute in your time to upgrading your mind expertise or thinking skill perhaps analytical thinking? Then you are experiencing problem with the book compared to can satisfy your short time to read it because this time you only find book that need more time to be study. Empirical Inference: Festschrift in Honor of Vladimir N. Vapnik can be your answer as it can be read by an individual who have those short extra time problems.
