Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications

Silicon Carbide (SiC) is a wide-band-gap semiconductor biocompatible material that has the potential to advance advanced biomedical applications. SiC devices offer higher power densities and lower energy losses, enabling lighter, more compact and higher efficiency products for biocompatible and long-term in vivo applications ranging from heart stent coatings and bone implant scaffolds to neurological implants and sensors.

The main problem facing the medical community today is the lack of biocompatible materials that are also capable of electronic operation. Such devices are currently implemented using silicon technology, which either has to be hermetically sealed so it cannot interact with the body or the material is only stable in vivo for short periods of time.

For long term use (permanent implanted devices such as glucose sensors, brain-machine-interface devices, smart bone and organ implants) a more robust material that the body does not recognize and reject as a foreign (i.e., not organic) material is needed. Silicon Carbide has been proven to be just such a material and will open up a whole new host of fields by allowing the development of advanced biomedical devices never before possible for long-term use in vivo.

This book not only provides the materials and biomedical engineering communities with a seminal reference book on SiC that they can use to further develop the technology, it also provides a technology resource for medical doctors and practitioners who are hungry to identify and implement advanced engineering solutions to their everyday medical problems that currently lack long term, cost effective solutions.

- Discusses Silicon Carbide biomedical materials and technology in terms of their properties, processing, characterization, and application, in one book, from leading professionals and scientists
- Critical assesses existing literature, patents and FDA approvals for clinical trials, enabling the rapid assimilation of important data from the current disparate sources and promoting the transition from technology research and development to clinical trials
- Explores long-term use and applications in vivo in devices and applications with advanced sensing and semiconducting properties, pointing to new product devekipment particularly within brain trauma, bone implants, sub-cutaneous sensors and advanced kidney dialysis devices

From reader reviews:

Joshua Canfield:

Have you spare time for just a day? What do you do when you have far more or little spare time? Yep, you can choose the suitable activity regarding spend your time. Any person spent their spare time to take a wander, shopping, or went to the actual Mall. How about open or perhaps read a book allowed Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications? Maybe it is to become best activity for you. You know beside you can spend your time together with your favorite's book, you can cleverer than before. Do you agree with the opinion or you have various other opinion?

Douglas Ayer:

Spent a free a chance to be fun activity to accomplish! A lot of people spent their sparettime with their family, or their friends. Usually they undertaking activity like watching television, about to beach, or picnic in the park. They actually doing same task every week. Do you feel it? Do you need to something different to fill your personal free time/ holiday? May be reading a book might be option to fill your free time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to try out look for book, may be the guide untitled Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications can be very good book to read. May be it can be best activity to you.

Richard Lawrence:

Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications can be one of your basic books that are good idea. All of us recommend that straight away because this guide has good vocabulary which could increase your knowledge in vocabulary, easy to understand, bit entertaining but still delivering the information. The copy writer giving his/her effort that will put every word into delight arrangement in writing Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications but doesn't forget the main level, giving the reader the hottest as well as based confirm resource data that maybe you can be one of it. This great information could drawn you into brand new stage of crucial imagining.

Cynthia Barksdale:

You could spend your free time you just read this book this publication. This Silicon Carbide Biotechnology: A Biocompatible Semiconductor for Advanced Biomedical Devices and Applications is simple to bring you can read it in the recreation area, in the beach, train as well as soon. If you did not have got much space to bring the actual printed book, you can buy often the e-book. It is make you easier to read it. You can save the particular book in your smart phone. And so there are a lot of benefits that you will get when you buy this book.
