**Introduction to Design and Analysis of Experiments (Textbooks in Mathematical Sciences)** George W. Cobb

The aim of this textbook is to provide an applied introduction to statistics, and in particular to the design and analysis of experiments for students with no background in the subject. The author sets forth these goals: a strong emphasis on choosing sound design structures prior to a formal discussion of ANOVA; explore real data sets using a variety of graphs and numerical methods; testing the assumptions behind standard ANOVA texts; and so on. The text is quantitatively accessible: more difficult algebraic discussions are contained in optional sections. Throughout the book, the author emphasizes the contextual understanding and interpretation of data analysis rather than stressing formal deductive, mathematical reasoning.
