Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications

Jitendra Mishra, Ram Kumar

Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications Jitendra Mishra, Ram Kumar
In recent years, down scaling in CMOS advanced technologies has provided high performance in the digital circuits and reduced cost thereby meeting to a large extent the increasing demand of wireless communication products. With this technology advancement, the unity-current gain frequency of CMOS technology is now over several tens of GHz making the realization of system on-chip solution possible which turns to further reduced cost. The concept of the RFIC design needed for the design of low noise amplifier such as gain, noise, stability, linearity, power consumption etc is discussed in the report. An overview has been given on different LNA architecture, their advantages and disadvantages have also been discussed. The designed circuit is simulated with the help of spectre simulator from cadence design system using UMC .18um CMOS technology. After the simulation we got the simulated result of low noise amplifier as forward voltage gain(S21) of 18.53dB, noise figure is 1.8dB and minimum noise figure is 1.6dB, input reflection coefficient (S11) is -24dB, output reflection coefficient(S22) is -15dB, stability factor (Kf) is 4, IIP3 -10 dBm by using power supply voltage of 1.8v.

From reader reviews:

Jon McKibben:

Now a day folks who Living in the era wherever everything reachable by match the internet and the resources in it can be true or not call for people to be aware of each data they get. How many people to be smart in getting any information nowadays? Of course the reply is reading a book. Looking at a book can help persons out of this uncertainty Information specially this Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications book as this book offers you rich information and knowledge. Of course the information in this book hundred pct guarantees there is no doubt in it you know.

Billy Reynolds:

Reading can called brain hangout, why? Because when you are reading a book mainly book entitled Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications your head will drift away trough every dimension, wandering in each and every aspect that maybe unknown for but surely might be your mind friends. Imaging each word written in a e-book then become one application form conclusion and explanation which maybe you never get just before. The Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications giving you another experience more than blown away your mind but also giving you useful information for your better life on this era. So now let us present to you the relaxing pattern here is your body and mind will likely be pleased when you are finished examining it, like winning a sport. Do you want to try this extraordinary investing spare time activity?

Dewayne Campbell:

The book untitled Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications contain a lot of information on it. The writer explains the girl idea with easy way. The language is very simple to implement all the people, so do certainly not worry, you can easy to read the item. The book was authored by famous author. The author gives you in the new age of literary works. It is easy to read this book because you can read on your smart phone, or gadget, so you can read the book in anywhere and anytime. If you want to buy the e-book, you can open their official web-site as well as order it. Have a nice learn.

Myra McKenzie:

In this age globalization it is important to someone to receive information. The information will make a professional understand the condition of the world. The health of the world makes the information quicker to share. You can find a lot of recommendations to get information example: internet, paper, book, and soon. You can observe that now, a lot of publisher this print many kinds of book. The actual book that recommended to your account is Design an Ultra Wideband Low Noise Amplifier for 6 GHz Applications this guide consist a lot of the information with the condition of this world now. This specific book was represented how does the world has grown up. The language styles that writer value to explain it is easy to understand. The actual writer made some study when he makes this book. Here is why this book suited all of

you.
